

Marking rubric

ELEC0054

1. Dissertation (90%)

Criteria	Mark	Description
Area of research and research gap identification. [M3, M4, M17]	< 39%. Fail.	Missing.
	40% - 49%. Condonable Fail.	Present but wrong or unclear .
	50% - 59%. Pass.	Clear area, but justifications are weak .
	60% - 69%. Merit.	Clear and strong, but not minimal and unfocused : removing elements from the argument would keep the argument strong.
	> 70% Distinction.	Clear, strong, and focused .
State of the art and related work. [M2, M4]	< 39%. Fail.	Missing.
	40% - 49%. Condonable fail.	Present but irrelevant .
	50% - 59%. Pass.	Present, relevant, but not critical: it does not describe why the works do not solve the identified problem.
	60% - 69%. Merit.	Present, relevant, critical but not sufficiently broad : misses critical work.
	> 70% Distinction.	Present, relevant, critical and sufficiently broad.
Methodology. [M1, M2, M5, M9]	< 39%. Fail.	Wrong, invalid, or irrelevant.
	40% - 49%. Condonable fail.	Plausible idea, but too vague/underspecified to trust or follow.
	50% - 59%. Pass.	Coherent pipeline described, but key details are missing so replication is fragile.
	60% - 69%. Merit.	Clear, justified, mostly reproducible method, with minor gaps in implementation detail .
	> 70% Distinction.	Unambiguous, fully specified, and reproducible end-to-end method with explicit assumptions and audit trail.
Experiments and evidence. [M1, M2]	< 39%. Fail.	Wrong, invalid, or irrelevant.
	40% - 49%. Condonable fail.	Correct, but no baselines or control measures.
	50% - 59%. Pass.	Correct, with baselines/control, but not statistically significant results (e.g., no multiple runs, or trials).
	60% - 69%. Merit.	Correct, with baselines/control, statistical significance, but lacks details to reproduce the results .
	> 70% Distinction.	Correct, with baselines/control, statistical significance, and details to reproduce the results.

Discussion and conclusions.**[M17]**

< 39%. Fail.

Missing discussion on impact.

40% - 49%.
Condonable fail.

Impact discussed, but claims are not supported by evidence.

50% - 59%. Pass.

Impact discussed, claims are supported, but the scope of the evidence is limited.

60% - 69%. Good.

Impact discussed, claims supported, with a clear discussion on limitations.

> 70% Distinction.

Impact discussed, claims supported, broad scope of application (e.g., tested at scale/production)
